Environmental Practices (presently in place and future goals)

At National Chain we strive to incorporate in our manufacturing culture Environmental Practices with Sustainability along with Social and Governance Topics. We focus five impact areas: Climate Solutions, Reducing Packaging and Waste, Protecting Natural Resources, Advancing Human Rights, and Innovating Production Methods.

An example of some of the practices to accomplish these goals are the updating of our facilities with efficient sources of lighting, energy efficient motors to drive our equipment, programmed heating and cooling, recycling of process water, and the digital sending of invoices and statements as opposed to paper copies by mail.

We further encourage and train our employees to be more Sustainability and Energy aware by turning out lighting and motors powering our equipment when not in use.
